

SYSTEM SECURITY AUDIT REPORT

Name: Prathmesh Laxman Talekar

Role: Cybersecurity Intern at WeIntern Company

Date: 09 May 2026

1. Objective

The objective of this security audit is to evaluate the security posture of a local machine by identifying vulnerabilities and weaknesses. The audit focuses on analyzing open ports, firewall configuration, antivirus protection, and installed software. The goal is to recommend corrective measures to enhance system security.

2. Scope

- Local system (Laptop – Windows OS)
- Network ports and services
- Firewall configuration
- Antivirus status
- Installed applications

3. Tools Used

- Nmap (Port Scanning)
- Windows Defender (Antivirus)
- Command Prompt
- Windows Security Settings

4. Audit Findings

Issue identified	Description	Severity	Recommendation
Open Ports	Ports 135 (RPC), 445 (SMB), 902, 912 found open.	Medium	Disable unused services or restrict via firewall.
Firewall Status	Disable unused services or restrict via firewall.	Low	Keep firewall active.
Antivirus Status	Windows Defender active but real-time protection OFF.	High	Enable real-time protection immediately.
Outdated Software	No risky or outdated software found.	Low	Continue regular monitoring.
Weak Password	No weak password detected (basic check).	Low	Use strong password policy.

5. Detailed Observations

Open Ports Scan:

Tool Used: Nmap

Result: Open ports detected – 135, 445, 902, 912

Analysis: These ports are used by Windows and VMware services and may expose the system if not properly secured.

Firewall Status:

Status: ON

Analysis: Firewall is properly configured for Domain, Private, and Public profiles.

Antivirus Protection:

Status: Enabled

Real-time Protection: OFF

Analysis: System may be vulnerable to malware threats due to disabled real-time protection.

Installed Software:

Observations: No risky or outdated software detected

Analysis: Software inventory appears secure.

6. Risk Summary

The system has a moderate level of security risk due to open ports and disabled real-time protection.

7. Recommendations

- Enable Real-Time Protection in Windows Security
- Perform regular antivirus scans
- Keep Windows and applications updated
- Monitor and secure open ports
- Avoid pirated software and suspicious downloads

8. Conclusion

The security audit identified vulnerabilities that can be mitigated by applying recommended actions.

End Of Report.
